

Thames Valley
Children's Centre

February 2009

To Whom It May Concern:

By replacing the pneumatic controls on the steam valve and several other key control points in our mechanical operation with new direct digital control, Durell Controls successfully eliminated several redundancies in the system and reduced our steam consumption by over 50% annually. We have improved system control and are able to monitor performance simply and efficiently.

We are very pleased with the ongoing support from Durell Control's knowledgeable and responsive service team.
